

**Campaign Update #48:
A look inside the new home of the Saints!**

If you drive by the new campus, you will see the exterior of the Fine Arts Center is taking shape! The high walls on the left side of this photo are for our new auditorium.

The actual size of the four centers of our new school, connected by a semi-circle walkway throughout, is becoming easier to visualize as construction continues.

This is a look inside the main Academic Center, where students will have many innovative seating options. (Check out the unique study cove areas in the stairway, as pictured in the rendering below.) Walls are being insulated and the science classrooms are already being painted.

Here's an example of the painting progress in the science classrooms. The science labs will have some open ceiling areas - now painted Saints blue!

Work continues inside the new top-loading gym. It's becoming easier to imagine the gym we will be enjoying next year as we cheer on the Saints!

Please make your 3-5 year pledge now to help us keep the build the future of our schools and keep the promise for future generations.

St. Mary's Grade School Addition Project

St. Mary's Grade School students showed their excitement for their new school addition during a recent recess! The brickwork is now visible on all sides of this project, which will add much-needed classroom spaces.

Inside the St. Mary's Grade School addition, progress is moving along with insulation, sheetrock, wiring, paint and more!
