Helen Keller

Helen Keller is considered a leader and advocate for the blind and deaf. Her life is an inspiration for many people. Helen Keller was born June 27, 1880, in Tuscumbia, Alabama. When Helen was 19 months old she became very ill. Doctors did not know what was wrong with her and even told her parents that she would probably die.

Doctors today think Helen most likely had scarlet fever or another illness that causes higher fevers. Helen survived the illness but lost her eyesight and hearing. Helen was blind and deaf. Helen was frustrated because she could not see or hear. She had many outbursts due to being upset. Helen’s mother was desperate for help for her daughter. She found a doctor who specialized in working with the blind and deaf.

Helen’s mother finally got in touch with Dr. Alexander Graham Bell who was also the inventor of the telephone. He had experiences working with the deaf. He believed in Helen and her mother find Anne Sullivan. Anne became Helen’s teacher.

With Anne’s help, Helen eventually learned Braille, an alphabet of raised dots that blind people feel with their fingers. Helen was also able to graduate from college with Anne by her side the entire time. Helen became a writer and speaker and worked passionately to improve life for the deaf and blind.
Create a diary entry that could have been written by Helen Keller. Think about the types of challenges she could have faced in a day.

Telling Time Practice
Write the time shown on the analog clocks.
1. A farm was 5 miles wide and 6 miles long. What is the area of the farm?

   The area is ________.

2. A lawn had a length of 7 feet and a width of 10 feet. What is the area of the lawn?

   The area is ________.

3. A rug had a length of 8 feet and a width of 8 feet. What is the area of the rug?

   The area is ________.

4. A rug had a length of 10 feet and a width of 7 feet. What is the area of the rug?

   The area is ________.
Convert the plural nouns to singular. Keep in mind, singular means just one and plural means more than one.

Many adverbs end in –ly. However, some adjectives end in –ly too. Keep in mind, adjectives describe a noun and adverbs often describe verbs. Read the sentences below and write on the line whether the ly word is an adverb or adjective.

1. The joggers ran quickly to the finish line.

2. The children whispered stories softly around the campfire.

3. The played at the beach happily.

4. My neighbor is very friendly.

5. We felt sweaty from the heat.

6. The people at the beach are friendly.
Fractions Practice
Write down the fraction that is shaded in.

_______  _______  _______

_______  _______  _______
A local town is debating building a mall on land that is currently a park. Some residents are for the mall and others are against it. Write a letter to the mayor and justify our position using 3 good reasons.
Chances are when you lose a tooth, it goes right under your pillow and you hope for a visit and some money from the tooth fairy. Did you know children around the world have different traditions for their teeth when they fall out? A tradition is something people do for a long time and they usually learn it from their parents who learned it from their parents.

In Egypt children throw their tooth to the sun so they can get a healthy new tooth in its place. In South Africa, children put their tooth in their slippers and wait for the tooth mouse to take it and bring them money. In Turkey, children throw their tooth on the roof and wish for a new one. In Canada, children put their tooth under their pillow and hope for the tooth fairy to bring them money.

In El Salvador children put their tooth under their pillow and wait for a rabbit to come and take it. This same rabbit will leave them money. Different children around the world have some very different but all very special traditions for their teeth.
Tooth Traditions Around the World

Television History

If you’re like most children your age, you watch almost 4 hours of television a day according to Kids Health.org. Many people wonder who thought of the television.

In the late 1800s, a German university student named Paul Gottlieb Nipkow patented the first electromechanical television system. While Nipkow’s invention was a step in the right direction, his idea of a television would not be possible for many years due to the need for more technological advancements. Nipkow’s work helped other inventors make progress towards creating what is known as the modern day television.

You’re probably wondering then who, invented the television? The credit for the invention of the modern television really comes down to two different people in two different places both working on the same problem at about the same time: Vladimir Kosma Zworykin, a Russian-born American inventor working for Westinghouse, a large electronics company, and Philo Taylor Farnsworth, a privately backed farm boy from the state of Utah.

Zworykin is often credited as being the father of television, because the patent for the heart of the TV, the electron scanning tube, was first applied for by Zworykin in 1923, under the name of an iconoscope. You’re probably wondering what a patent is. Just like it’s against the law to steal someone’s property, you also can’t steal their ideas or inventions. A patent is a government document that gives an inventor the right to prevent others from making, using or selling their invention or idea without their permission. The iconoscope was an electronic image scanner that worked a lot like a basic camera. Farnsworth was the first of the two inventors to successfully demonstrate the transmission of television signals, which he did on September 7, 1927, using a scanning tube of his own design. Farnsworth received a patent for his electron scanning tube in 1930.

Farnsworth was just 14 years old when he started working on the television. He continued to go to court over patents for the television and that is why, to this day, there isn’t a clear inventor for the television. However, Farnsworth’s work has made today’s television that you watch possible.
Television History

8 x 5= 3 x 5= 4 x 2=
10 x 4= 10 x 9= 5 x 2=
9 x 7= 7 x 7= 3 x 9=
4 x 4= 6 x 5= 10 x 2=
9 x 7= 5 x 7= 7 x 2=
Ice cream is one of the most popular foods to enjoy during the spring and summer months. Many people wonder about who invented ice cream and how long it has been around.

The history of ice cream is somewhat complicated. Many countries have claimed they invented ice cream. However, historians know that ice cream was around as early as 4th century B.C. It was known that in China, people were able to freeze milk and add ice to it. Therefore, it is most likely that ice cream was brought from China back to Europe.

Once ice cream made its way to the United States, famous Americans such as George Washington and Thomas Jefferson served it to their guests. The first ice cream parlor in America opened in New York City in 1776. American colonists were the first to use the term “ice cream” to refer to the frozen treat. In 1851, Jacob Fussell in Baltimore opened the first large-scale commercial ice cream plant.

Today ice cream is a popular treat. In the United States alone, ice cream companies are earning over 10 billion dollars in sales a year.

Creating Fractions

Shade in \( \frac{4}{6} \) of the circle.

Shade in \( \frac{3}{4} \) of the circle.

Shade in \( \frac{3}{3} \) of the circle.

Shade in \( \frac{1}{2} \) of the rectangle.
Addition to 1000 Practice With Regrouping

313 + 400 = 713
567 + 345 = 912
212 + 134 = 346
780 + 220 = 1000

413 + 500 = 913
600 + 300 = 900
400 + 225 = 625
176 + 218 = 394

500 + 500 = 1000
420 + 518 = 938
333 + 222 = 555
456 + 321 = 777

432 + 334 = 766
529 + 445 = 974
790 + 222 = 1012
956 + 44 = 1000
If I had 1 Million Dollars...
Addition to 100 Practice
With Regrouping

49 + 22 = 71
23 + 55 = 78
43 + 21 = 64
72 + 23 = 95

45 + 19 = 64
13 + 6 = 19
43 + 27 = 70
27 + 13 = 40

29 + 18 = 47
19 + 16 = 35
28 + 40 = 68
89 + 10 = 99

38 + 16 = 54
43 + 18 = 61
90 + 10 = 100
57 + 12 = 69

67 + 15 = 82
45 + 12 = 57
45 + 10 = 55
88 + 7 = 95
Did you know that each day, Americans buy nearly 62 million newspapers and throw out around 44 million of them? If we could recycle all of our newspapers, we could save about 250,000,000 trees each year!

Newspaper can be recycled into many different things such as: egg cartons, game boards, new newspaper, gift boxes, and packaging material. Office paper, commonly known as “white paper” can recycled into paper towels, tissue paper and toilet paper.

Many people are beginning to purchase recycled paper. Scientists have found in recent years that making paper from recycled materials results in 74% less air pollution and 35% less water pollution.
Recycling Paper

Comprehension Questions

1. Was this passage fiction or non fiction? Justify your answer.

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________

2. What are some items that can be created using recycled paper?

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________
__________________________________________________________________

3. Think of an alternative title for this passage.

__________________________________________________________________

4. What do you think stops some people from recycling paper?

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________
__________________________________________________________________
Rewriting Addition into Multiplication

Magnets

Magnets attract objects made with iron. They have two poles: a north pole and a south pole. The opposite poles of magnets will attract each other, while the alike poles will repel. This means that a north and north pole will repel as will 2 south poles when brought next to each other. A north and a south pole will always be attracted to each other.

Many people wonder what magnets are made of. Magnets are made of metals that have: iron, cobalt, nickel, or steel and have been exposed to a magnetic field. The magnetic field organizes the magnet’s molecules into north and south poles.

Most metals however are not attracted to magnets, these include silver, gold, copper, and aluminum.
Name:_________________

Magnets Comprehension Activities

1. Magnets can be made of metals including:
   A. plastic
   B. steel
   C. silver
   D. aluminum

2. Which of these 2 poles will attract?
   A. north and north poles
   B. south and south poles
   C. north and south poles
   D. all of the above

3. Magnets attract objects with _______ in them
   A. plastic
   B. iron
   C. wood
   D. copper

4. List 2 everyday objects that magnets are attracted to:
