

FROM THE STREAM LAB

November 2019

[Today's Date]

We have a first print job completed on our 3D Printer! Thank you again to all our 2019 donors who made this possible for our STREAM Lab! We have lots of ideas and projects coming! Our first print is a tugboat called Benchy!

Mr. D's Third and Fourth Grade Class studied Motion, and Friction. They explored ways to demonstrate physical forces by creating balloon powered bottle cars. The challenge: can their car go 3' in a straight line?

PRESCHOOL: We are excited to see our Preschool Students using the STREAM lab once or twice a week! They are learning how to collaborate. They created hammers that were very strong!

KINDERGARTEN: As we care for all, Can we create a safe place for a person? So we built some cool houses that could keep out the wind, sun, and rain.

STREAM Lab is a busy place and we are grateful for the donations and supplies that we have. Thank you for your support!
