

Quadrilateral Song (To the tune of "What a Man Gotta Do" by the Jonas Brothers)

Count my sides I got all 4
Gonna sing a song to make sure we got 4
We got 4

Quadrilaterals have names like trapezoid and rectangle
square, and rhombus, rhombus

I'm gonna know all 4 names, sign me up for GoMath I'm sure, I'm sure!

So what a kid gotta do? What a kid gotta do?
To remember all these quad rules?
Do you know your quad?
We'll all nod
Cuz we work so hard and we're all stars

So what a kid gotta do? What a kid gotta do?
To remember all these quad rules?
Do you know your quad?
We'll all nod
Cuz we work so hard and we're all stars

Trapezoid is where we stare
At 1 pair of parallel sides, 1 pair

Then we look at rectangle and see that now there's 2 that's crazy, who knew? Who knew?
2 sides are also equal length, 4 right angles give it strength, strength

There's a square too which has two
Pairs of parallel sides
4 sides equal
4 right angles
We must exclaim one more name

Rhombus is last
It can't be passed
It's got 2 parallel sides
And 4 equal sides
4 equal sides

We know with our quads we won't hide!
