

Five Themes of Geography

1. Location- where a specific place or thing is located (address, NE, NW, SE, SW)
2. Place- how one place is different from another place (climate, physical features, traditions)
3. Human- environment interaction- how people change the environment to help themselves example: cutting down trees to build houses
4. Movement- how things, goods, people and information get from place to place. (email, phone, trucks, ships)
5. Regions- areas that have something in common (desert, rain forest, grassland)
