Summer Learning
Math Practice 2020
Future Third Grade Students*

Dear Future Third Grade Parents,

The summer math activities will enable your child to review math concepts and reinforce skills learned this year. Just a few minutes each day spent "thinking and talking math" will help reinforce the math that has been learned and begin to bridge the foundation for extending to the concepts that will be developed next year. The goal is for your child to have fun thinking and working collaboratively to communicate mathematical ideas. While your child is working, ask him how the solution was found and why a particular strategy was chosen.

Students in third grade will master basic skills and continue to develop more complex knowledge in mathematics.

Below are several skills your child will review and build upon entering third grade. Please have your child practice these math concepts when given the opportunity to have a swift transition into the next grade level.

The major work for third grade:

- multiplication and division to 10×10 , and multi-digit addition and subtraction
- understanding fractions
- solving problems about area
- Tell time to 5 minute intervals and elapsed time (for example: It's 7:15 What time will it be in an hour?)

Highlight the math in everyday activities:

- When shopping, help kids calculate change or discounts.
- Read short math stories together.
- Play math games: Monopoly, Battleship, Connect Four, Yahtzee, Checkers or Jigsaw Puzzles.
- Practice basic math Problem-of-the day.

Math Resource Websites

- The following sites provide free online math tasks. Please review each site and monitor your child's online sessions.
