

Dear Parents and Guardians,

The purpose of the **Summer Math Packet** is to keep student's math skills current through the summer. Problems contained in the packet will review concepts and problem solving skills needed for the upcoming school year.

I recommend that students do a problem a day over the course of eight weeks. Waiting till the end of summer to do the entire packet defeats the purpose and causes frustration for students and parents.

Please encourage students to spend time thinking about how to approach the problem and showing their work, calculators are not necessary to complete the problems.

All students are required to bring the completed packet to school on the first day. We will review the packet in class and students will complete an assessment within the first two weeks of school.

I have included a list of websites and apps. Please encourage students to use technology resources to develop and strengthen multiplication fluency, problem solving skills and a deeper understanding of concepts.

Enjoy summer!

Sincerely,
Mrs. Larkin

Below is a list of websites , try to visit them daily or weekly so that you are ready to go in September!
