

# SJS - 4th Grade Engineers

## Design & Build a City

SCAN ME

Miss Tuli taught her fourth-graders about engineering. The students learned about the differences between needs and wants. Each student had to design and build their city, then briefly describe it in front of the class.

Marissa Lang named all the building in her city after her siblings.

Andy Zalewski built his city out of Legos.

After her presentation, Emma Haws takes questions from her classmates.

**Following the students' presentations,** the class was able to ask questions about how they developed their cities and what materials they use. Students at St. Joseph School learn about public speaking through presenting projects, reading at Liturgies and prayer services, and taking Elocution class.

Alivia Shenigo (Left) and Ella Jansen (Right) describe all the buildings in their cities and how they engineered them.
