

**Mandatory Public Notification Language  
for a MCL Coliform Violation (TCR 22)**

The Travis County WCID #18 water system, PWS ID# 2270083,  
Collected 15 water samples during the month of June 2015,  
3 that contained coliform bacteria. This water system is required to submit a minimum of 6  
routine water samples each month for bacteriological analysis.

The Texas Commission on Environmental Quality (TCEQ) sets drinking water standards in  
Texas and has determined that the presence of total coliform is a possible health concern.  
Coliforms are bacteria that are naturally present in the environment and are used as an indicator  
that other, potentially-harmful, bacteria may be present. Coliforms were found in more samples  
than allowed and this was a warning of potential problems.

For water systems analyzing at least 40 samples per month, no more than 5.0 percent of the  
monthly samples may be positive for total coliforms. For systems analyzing fewer than 40  
samples per month, no more than one sample per month may be positive for total coliforms.
