Abortion Pill Reversal Study Misrepresented in Media

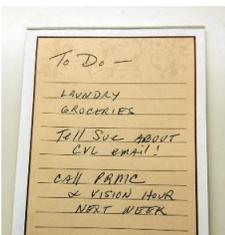

Education: The abortion pill, RU-486, is responsible for a growing number of early abortions, including 32% of Texas abortions in 2017.(1) It can be used up to 9 weeks of pregnancy (7 weeks after conception), and kills the young child by blocking the effects of progesterone, which is required to maintain the pregnancy. (2) The first step of the procedure is to block the action of progesterone. The second step is to induce contractions and expel the dead child. After the first step, the process can be reversed by administering large doses of progesterone. Since its inception in 2007, over 900 babies have been born after being rescued by abortion pill reversal, which has a 64-68% success rate, with no increased risk of birth defects or preterm births. (3) Women can get connected to a local doctor through the web site, www.abortionpillreversal.com, or a hotline, **(877) 558 0333**.

Abortion advocates, however, have referred to the procedure as “junk science” and accused doctors of using women for unethical experimentation. A recent study was halted when 3 women to the hospital with hemorrhaging. Portrayal in the media implied that the hemorrhaging was caused by the reversal or “not properly completing the abortion procedure”. In fact only one of the 5 women given progesterone had excessive bleeding, while 2 of the 7 who were given placebos were hospitalized. Hemorrhaging is a known side effect of RU-486, and the likely cause for the excessive bleeding. (4)

Prayer: Dear Father God, please have mercy on women and girls who are experiencing a crisis pregnancy. Help them to trust in You and to find the support they need to cope with the pregnancy and resist any coercion they may be facing. If they do take the abortion pill, please help them even then to regret their decision and desire to reverse it. Keep their precious child alive until they can find the help they need to reverse the effect of the pill. Help them to make a positive plan for the care of their child, and allow the child to survive and grow to be healthy and happy, with a secure home where they are loved and taught to love you.

Action: Spread the word to everyone you know – if someone takes the abortion pill, it is possible to reverse it if they act quickly! Remember the web site – www.abortionpillreversal.com where the phone number can be found to find help. Of course non-judgmental help is available at 800-712-HELP (Option Line) to anyone who is facing difficulties because of a pregnancy.
