

How To Calculate Your Final Grade for Ms. Bradberry

A. Coursework: Points you earned ____ / 100 = Your % x .75 = Points Towards Your Final Grade

B. Final Exam: Points you earned ____ / 100 = Your % x .25 = Points Towards Your Final Grade

Example

A. If you earned 85 points for your Coursework, then you have an 85% for Coursework. Since Coursework counts as 75% of your Overall Grade, you multiply 85 by 75% (.75) to determine the total points that will count towards your Overall Grade:

$$85 \times .75 = 64$$

B. If you earned 90 points for your Final Exam, then you have a 90% for the Final Exam. Since the Final Exam counts as 25% of your Overall Grade, you multiply 90 by 25% (.25) to determine the total points that will count towards your Overall Grade:

$$90 \times .25 = 23$$

Now you need to Add your totals from **Line A** and **Line B** to know the Overall Grade:

$$64 \text{ (Line A)} + 23 \text{ (Line B)} = 87.$$

In this example, the student earned an 87% for Ms. Bradberry for Quarter 4.
