

Bill Gates: Vaccines Are ‘Phenomenal’ Profit Makers

“Bill Gates — What You Were Not Told,” reviews the personal and professional background of the Microsoft mogul, including a statement revealing his real motive for investing in vaccines — their 20 - 1 return on investment.

By
[Dr. Joseph Mercola](#)

Story at-a-glance

- After years of building a reputation as a “ruthless tech monopolizer,” Bill Gates 2.0 was launched with the creation of the Bill & Melinda Gates Foundation. With this foundation, he reinvented and rebranded himself as one of the world’s most generous philanthropists.
- However, Gates’ brand of philanthropy creates several new problems for each one it solves and can best be described as “[philanthrocapitalism](#).”
- Today, Gates [monopolizes](#) or wields disproportionate [influence](#) over the [tech industry](#), global health and [vaccines](#), [agriculture](#) and food policy (including biopiracy and [fake food](#)), weather modification and other [climate](#) technologies, surveillance, education and media.
- According to Gates, vaccines are phenomenal profit makers, with more than a 20-to-1 return.
- Gates is now promoting the technocratic “reset” plan, which includes an aggressive climate change agenda, yet Gates’ extensive travel by private jet makes him a top polluter.

“Bill Gates — What You Were Not Told,” a segment of the [Plandemic documentary](#), reviews the personal and professional background of the Microsoft mogul, Bill Gates. Contrary to popular myth, many see Gates as more of an opportunist than a genius inventor, and the video touches on several of the less honorable moments of his career.

After years of building a reputation as a “ruthless tech monopolizer,” Bill Gates 2.0 was launched with the creation of the Bill & Melinda Gates Foundation. With this foundation, he reinvented and rebranded himself as one of the world’s most generous philanthropists.

Gates’ charity is not what it seems

Alas, as noted by AGRA Watch, [Shiva Vandana](#), Ph.D., and others, Gates’ brand of philanthropy creates several new problems for each one it solves and can best be described as “[philanthrocapitalism](#).” As noted in the AGRA Watch [article](#), “Philanthrocapitalism: The Gates Foundation’s African Programs Are Not Charity,” published in 2017, advocates of philanthrocapitalism:

“... often expect financial returns or secondary benefits over the long term from their investments in social programs. Philanthropy becomes another part of the engine of profit and corporate control. The Gates Foundation’s strategy for ‘development’ actually promotes neoliberal economic policies and corporate globalization.”

Indeed, over the years, Gates has ended up in a position where he monopolizes or wields disproportionate influence over not only the tech industry, but also global health and vaccines, [agriculture](#) and [food policy](#) (including biopiracy and fake food), weather modification and other [climate technologies](#), surveillance, education and [media](#).

Not surprisingly, he’s tied to online fact checker organizations that strangle free speech, and [recently told](#) “60 Minutes” that to combat mistrust in science, we need to find ways to “slow down the crazy stuff.” What’s “crazy” and what’s not, however, is rarely as clear-cut as the mainstream media would like you to believe.

And, like a true philanthrocapitalist, Gates’ generosity ends up benefiting himself most of all. As [discussed in](#) “Bill Gates — Most Dangerous Philanthropist in Modern History?” the Bill & Melinda Gates Foundation donates billions to the very same [companies and industries](#) that the foundation owns stocks and bonds in. As Gates himself reveals in the featured video, he figured out that vaccines are phenomenal profit makers, saying they’re the best investment he’s ever made, with more than a 20-to-1 return. The one thing that allows for this is the [liability shield vaccine makers](#) have been given by the government.

Gates, global climate czar

As mentioned in the featured video, Gates is financing an effort to divert solar rays from the Earth’s surface in an attempt to combat global warming — an irrational approach at best, considering the potential this has to devastate global agriculture.

His latest book also details his [climate change](#) recommendations, which just so happens to include urging governments to support the very companies he’s invested in and similar sleight-of-hand gestures.

Meanwhile, as noted by The Nation, Gates himself is a serious polluter, with a 66,000 square-foot mansion, a private jet, 242,000 acres of farmland (which makes him the largest farmland owner in the U.S.) and investments in fossil fuel-dependent industries such as airlines, heavy machinery and cars.

“According to a 2019 academic study looking at extreme carbon emissions from the jet-setting elite, Bill Gates’s extensive travel by private jet likely makes him one of the world’s top carbon contributors — a veritable super emitter,” The Nation [writes](#).

“In the list of 10 celebrities investigated — including Jennifer Lopez, Paris Hilton and Oprah Winfrey — Gates was the source of the most emissions. ‘Affluent individuals can emit several ten thousand times the amount of

greenhouse gases attributed to the global poor,' the paper noted. 'This raises the question as to whether celebrity climate advocacy is even desirable ...'"

Gates leads the technocratic takeover

Gates' focus on climate change makes perfect sense once you realize that he's part of the [technocratic elite](#) that, for decades, have been working to gobble up the world's resources in anticipation for the [Great Reset](#), previously known as the One World Order.

Over the past year, the need for the Great Reset has been announced by government leaders around the world, the clarion call being that we need to "reset" the global economy and the way we live, work, travel and socialize in order to make the world more fair and sustainable. Addressing climate change under the banner of a global emergency is part and parcel of that PR campaign.

If you've paid attention, you've probably seen the hints. During the initial lockdowns in the early part of 2020, there were a slew of articles talking about how nature and wildlife were thriving in the absence of human socialization and travel. At other times, the [COVID-19 pandemic](#) has been presented as a warning to us all as to what happens when you get out of sync with nature.

No real food for you

Gates clearly feels pressure to do his part to realize the technocratic dream. He [told](#) "60 Minutes" he is eager to see his various visions come to fruition within his lifetime, and he guesses he might have 20 or 30 years left. As [reported by](#) ZeroHedge:

"Gates is pushing drastic and 'fundamental' changes to the economy in order to immediately halt the release of greenhouse gasses — primarily carbon dioxide— and 'go to zero' in order to save the planet from long-prognosticated (and consistently wrong) environmental disaster. Changes we'll need to make in order to realize Gates' vision include:

- Allocating \$35 billion per year on climate and clean energy research.
- Electric everything.
- Widespread consumption of fake meat, since cows account for '4% of all greenhouse gases.'
- Retooling the steel and cement industries, which Gates says account for 16% of all carbon dioxide emissions, to inject up to 30% of captured CO2 into concrete, and create a different type of steel.
- Widespread adoption of next generation nuclear energy to supplement wind and solar.

And since producing plants to make fake meat emits gases as well, Gates has backed a company which uses fungus to make sausage and yogurt, which the billionaire calls 'pretty amazing' ... 'The microbe was

discovered in the ground in a geyser in Yellowstone National Park. Without soil or fertilizer it can be grown to produce this nutritional protein — that can then be turned into a variety of foods with a small carbon footprint.”

Indeed, Gates would like wealthy Western nations to switch entirely to synthetic lab-grown beef, and [rails against](#) legislative attempts to make sure fake meats are properly labeled as such, since that slows down public acceptance.

Gates again proves feudalism is a failed system

With his [land ownership](#), Gates clearly is in a monopoly position (yet again!) to drive agriculture and food production in whatever direction he desires, and he wants us all to eat as much fake food as possible.

As [noted](#) in a long and detailed article on Gates’ philanthrocapitalist endeavors by The Defender:

“Thomas Jefferson believed that the success of America’s exemplary struggle to supplant the yoke of European feudalism with a noble experiment in self-governance depended on the perpetual control of the nation’s land base by tens of thousands of independent farmers, each with a stake in our democracy.

“So at best, Gates’ campaign to scarf up America’s agricultural real estate is a signal that feudalism may again be in vogue. At worst, his buying spree is a harbinger of something far more alarming — the control of global food supplies by a power-hungry megalomaniac with a Napoleon complex.”

The article goes on to detail Gates’ “long-term strategy of mastery over agriculture and food production globally,” starting with his support of [GMOs](#) in 1994. Ever since then, Gates’ “philanthropic” approaches to hunger and food production have been built around his technology, chemical, pharmaceutical and oil industry partners, thereby ensuring that for every failed rescue venture, he gets richer nonetheless.

“As with Gates’ African vaccine enterprise, there was neither internal evaluation nor public accountability,” The Defender [writes](#):

“The 2020 study ‘False Promises: The Alliance for a Green Revolution in Africa (AGRA)’ is the report card on the Gates’ cartel’s 14-year effort.

“The investigation concludes that the number of Africans suffering extreme hunger has increased by 30 percent in the 18 countries that Gates targeted. Rural poverty has metastasized dramatically ...

“Under Gates’ plantation system, Africa’s rural populations have become slaves on their own land to a tyrannical serfdom of high-tech inputs, mechanization, rigid schedules, burdensome conditionalities, credits and subsidies ... The only entities benefiting from Gates’ program are his international corporate partners ...

“His investment history suggests that the climate crisis, for Gates and his cronies, is no more than an alibi for intrusive social control, ‘Great Reset’-scale surveillance, and massive science fiction geoengineering

boondoggles, including his demented and terrifying vanity projects to spray the stratosphere with calcium chloride or seawater to slow warming, to deploy giant balloons to saturate our atmosphere with reflective particles to blot out the sun, or his perilous gambit of releasing millions of genetically modified mosquitoes in South Florida.

“When we place these nightmare schemes in context alongside the battery of experimental vaccines he forces on 161 million African children annually, it’s pretty clear that Gates regards us all as his lab rats.”

Gates Foundation seeded catastrophic COVID-19 policies

Gates, of course, has also played a leading role in the global response to the COVID-19 pandemic. [According to](#) investigative journalist Jordan Schachtel who has a channel on Substack, Gates had a hand in the “criminally negligent coronavirus response policies” that killed an inordinate number of senior citizens in nursing homes in New York, California, New Jersey, Pennsylvania and Michigan.

Schachtel points out that a common thread in these instances is that they listened to the frightfully inaccurate modeling forecasts from the Institute for Health Metrics and Evaluation (IHME), which is funded and controlled by the Bill & Melinda Gates Foundation. He [writes](#):

“In March and early April, politicians were informed by the modeling ‘experts’ at Gates-funded IHME that their hospitals were about to be completely overrun by coronavirus patients.

“Modelers from IHME claimed this massive surge would cause hospitals to run out of lifesaving equipment in a matter of days, not weeks or months. Time was of the essence, and now was the time for rapid decision making, the modelers claimed.

“On two separate April 1 and April 2 press conferences, Cuomo made clear that his policy decisions were based off of the IHME model ... In an April 9 briefing, Michigan Governor Gretchen Whitmer referred to the IHME model in order to project deaths and the PPE resources needed for the supposed surge. It was the same story with the government of Pennsylvania.”

White House Coronavirus Task Force members Drs. [Anthony Fauci](#) and Deborah Birx, both of whom have substantial ties to Gates, also relied on the IHME forecast models. As noted by Schachtel:

“These models, and the policy decisions that were made by relying on them, set off a chain of events that led to indefinite lockdowns, complete business closures, statewide curfews, and most infamously, the nursing home death warrants.”

Delete that which no longer serves

The Gates Foundation also co-sponsored [Event 201](#), a scripted tabletop exercise held mere months before the COVID-19 outbreak that ended up being remarkably prophetic.

Strangely enough, in an April 2020 BBC [interview](#), Gates denied the simulation had occurred, saying that “We didn’t simulate this, we didn’t practice, so both the health policies and economic policies, we find ourselves in uncharted territory.” In an article for National Herald India, Norbert Häring highlights Gates’ apparent forgetfulness, [stating](#):

“It is true that if a little less emphasis had been placed on opinion manipulation, more attention could have been paid to health and economic policy. One of the four meetings was entirely devoted to this. But health and economic policies did get discussed. Gates can hardly have forgotten that.

“The video on control of public opinion is the most interesting one, as it helps to put in perspective the efforts in this regard, which we are currently experiencing. One participant tells us that Bill Gates is financing work on algorithms which comb through the information on social media platforms to make sure that people can trust the information that they find there.”

Gates has also erased other evidence where the truth is coming back to haunt him. Case in point: Gates-funded fact checkers have vehemently denied claims that Gates ever said we’ll need digital vaccine passports, passing it off as yet another crazy conspiracy theory.

But Gates did say that in a June 2020 TED Talk. Someone just edited that specific statement out of his speech after the quote started making the rounds on social media. In a December 11, 2020, article, The Defender [presented](#) the proof.

Fact checkers also dismiss claims that subdermal microchips or digital tattoos will eventually be used to track and trace us, yet as noted by The Defender, Gates did commission MIT to develop an injectable quantum dot dye system to “tattoo” medical data on your body, and has patented technology that uses implanted biosensors that monitor body and brain activity and is tied to a crypto currency system.

He’s also invested tens of millions into microchip devices with remote-controlled drug-delivery systems, military contractors that track and trace pandemic infections and vaccine compliance, and has a greater than \$1 billion investment in 5G video surveillance satellites and 5G antennas. When you put all of these things together, Gates’ plans start to take on a rather ominous feel.

Gates is the most visible figurehead of modern technocracy

Whether preplanned or not, the [COVID-19 pandemic](#) is clearly being used to usher in highly controversial changes that are unmistakably totalitarian-building, including the private take-over of government through public-private partnerships.

Surveillance has become the biggest for-profit industry on the planet, and your entire existence is now being targeted for profit. Among those who stand to profit the most is Gates himself.

For a better understanding of what you're giving up by going along with the mainstream narrative that we need [Big Tech](#) to save us, see my [article](#) about social psychologist and Harvard professor Shoshana Zuboff and her extraordinary book, "The Age of Surveillance Capitalism."

You also won't want to miss my [interview](#) with Patrick Wood, featured in "The Pressing Dangers of Technocracy." He paints a picture that can be hard to swallow, especially if you're just coming around to hearing about all of this for the first time, but it's really crucial that everyone begin to understand what we're facing.

Time is running out. To have any chance of stopping it, we must understand our trajectory, and unite to change the course Gates and others like him have set for us.
